DETAILED ACTION

Page 2

Claim Objections

- 1. Claims 7-15 and 30-38 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. For claims 7, 10, 13, 30, 33, and 36, defining the distances V_{cc}, V_{ee}, and AB without more does not further limit the parent claims 1 and 24. The examiner suggests writing claim 7 into claim 8, claim 10 into claim 11, claim 13 into claim 14, claim 30 into claim 31, claim 33 into claim 34, and claim 36 into claim 37 to remedy the situation.
- 2. Claims 24-48 are objected to because of the following informalities: For claim 24, the phrase "An interconnect structures" does not agree in number. The examiner suggests deleting the "s" at the end of the word "structures". Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claim 15 is rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for AB distances of 1-10 nm, does not reasonably provide enablement for AB distances of 2-50 nm. The specification does not enable

Application/Control Number: 09/848,153

Art Unit: 1712

any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims. For claim 15, on page 8, lines 27-29, applicant sets forth that the distance for AB are 1-10 nm, and more preferably 2-5 nm. The specification does not support distances of AB of 11-50 nm.

- 5. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 6. Claims 17-19 and 40-42 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

For claims 17-19 and 40-42, there is a lack of antecedent basis for the term "said low-k dielectric binder". Applicant does not define a binder in claims 1 or 24.

Allowable Subject Matter

- 7. Claims 1-6, 16, 20-23 and 49-66 are allowed.
- 8. Claims 17-19 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.
- 9. Claims 7-14, 24-39, and 43-48 would be allowable if rewritten or amended to overcome the claim objections set forth in this Office action.
- 10. Claims 40-42 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph and the claim objections set forth in this Office action.

Application/Control Number: 09/848,153 Page 4

Art Unit: 1712

11. Claim 15 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, first paragraph and the claim objections set forth in this Office action.

12. The following is a statement of reasons for the indication of allowable subject matter: The closest prior art is Gaynor (U.S. Patent No. 6,329,062), Gallahger et al. (U.S. Patent Application Publication No. 2003/0006477 A1), and Okura et al. (JP 10-284602, Machine Translation obtained from JPO web-site). Gaynor teaches a dielectric binder material that contains pores and silica particles. However, Gaynor does not teach or suggest particles or pores in the diameter ranges specified by applicant. Gaynor also does not teach or suggest that the particles and pores are uniformly spaced apart and arranged on three-dimensional periodic lattices. Figures 1A and 1B of Gaynor clearly show random orientations of particles and pores. Gallahger teaches porous dielectric materials where porogens of particle sizes within applicant's range are at least partially removed from the binder. However, Gallahger fails to teach or suggest that the pores and any of the porogen that would remain in the structure are uniformly spaced and are located on periodic lattice sites. Okura teaches voids, particles, and a binder material that make up an insulating layer of a semiconductor device. Okura fails to teach the size of the voids that are created or dielectric constants within the range claimed by applicant. For claims 49-66, none of theses references teach or suggest the method as claimed by applicant.

Conclusion

13. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gnade et al. (U.S. Patent No. 5,561,318), Ayers (U.S. Patent No. 5,801,092), Leung et al. (U.S. Patent No. 6,171,687), Gates et al. (U.S. Patent No. 6,440,560), Asakawa et al. (U.S. Patent No. 6,565,763), and Gore et al. (U.S. Patent Application Publication 2003/0008989 A1) are cited for general interest.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey B. Robertson whose telephone number is (703) 306-5929. The examiner can normally be reached on Mon-Fri 7:00-3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert A. Dawson can be reached on (703) 308-2340. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0661.
